Contents

1 **Mathematical Induction** 1

1.1 Introduction 1
1.2 Some Examples 7
1.3 Applications 18
1.4 A Second Look at Induction 32
1.5 Comments and References 38

2 **Elementary Combinatorics** 40

2.1 Introduction 40
2.2 The Rules of Sum and Product 46
2.3 Two Models of Counting 52
2.3.1 The Sample Model of Counting 52
2.3.2 The Distribution Model of Counting . . . 59
2.4 Examples and Applications 68
2.5 The Integer-Solution-of-an-Equation Problem . . . 77
2.6 A Brief Look at Combinatorial Identities 82
2.7 Comments and References 92

3 **Generating Functions** 94

3.1 Introduction 94
3.2 Modeling Problems with Generating Functions . . . 99
3.3 Extracting the Coefficients of Simple Ordinary Generating Functions 104
3.4 Examples with Ordinary Generating Functions . . 110
3.5 Generating Functions for Arrangements 117
3.6 Partitions 125
3.7 Comments and References 130

4 **Recurrence Relations** 132

4.1 Introduction 132
4.2 Linear Recurrence Relations with Constant Coefficients: Definitions 145
4.3 Linear Recurrence Relations with Constant Coefficients: Solution 147
4.3.1 Introduction 147

4.3.2 Homogeneous Linear Recurrence Relations with Constant Coefficients: The Method of Characteristic Roots 148
4.3.3 Inhomogeneous Linear Recurrence Relations with Constant Coefficients 156
4.4 Other Techniques for Solving Recurrence Relations . 162
4.5 Divide and Conquer Relations 169
4.6 Comments and References 176

5 The Inclusion-Exclusion Principle 178

5.1 Introduction 178
5.2 Examples 184
5.3 A Generalization of the Inclusion-Exclusion Principle . 191
5.4 Comments and References 194

6 Introduction to Graph Theory 195

6.1 Some Definitions and Examples 195
6.2 The Handshaking Lemma 208
6.3 Isomorphism 211
6.4 Planarity 216
6.5 What is Efficient? 232
6.6 Comments and References 235

7 Traversability 237

7.1 Eulerian Circuits 237
7.2 Hamiltonian Cycles 243
7.3 The Traveling Salesperson Problem 254
7.4 Comments and References 263

8 Trees, Directed Graphs, Matchings, and Colorings . 265

8.1 Trees 265
8.1.1 Characterizations of Trees 265
8.1.2 Spanning Trees 269
8.1.3 Rooted Trees 273
8.1.4 Applications 276
8.2 Directed Graphs 285
8.2.1 Definitions and Examples 285
8.2.2 Traversability 288
8.2.3 Applications 294

8.3 A Brief Look at Matchings and Colorings . . . 300
8.3.1 Pairings and Matchings 301
8.3.2 Colorings 311
8.3.3 The Four Color Problem 315
8.4 Comments and References 324

Appendix Some Mathematical Preliminaries . . 327

A.1 Introduction 327
A.2 Sets, Relations, and Functions 328
A.2.1 Sets 328
A.2.2 Relations and Functions 334
A.3 Elementary Proof Techniques 339
A.3.1 Introduction 339
A.3.2 Techniques for Implications 340
A.3.3 Proofs by Contradiction 343
A.3.4 Constructive and Nonconstructive Proofs . . 343
A.4 Comments and References 347

Answers to Odd-Numbered Problems 349
